

The Energy Efficiency Training Center offers a focused & technical training environment. The topics covered, and skills acquired will be a valuable assist to getting hired and successfully working in the weatherization industry.

The Energy Efficiency Training Center provides *hands on, real world, focused training* for new employees of companies involved in the home weatherization industry, building trades personal involved in energy efficient improvements for homes, and individuals seeking the skills needed to seek employment in the fast growing residential energy efficiency and building performance industry.

The key to our effort is our state of the art, hands on training center designed to simulate the average home construction. Our "classroom" is an entire house built inside a 2,400 sq. ft. garage. The "house" features four different types of siding and paneling on the outside, and all the normal walls, slopes and crawl spaces that exist in an average structure. The "house inside the garage" also includes an attic. A simulated basement is adjacent to the structure, with working heating, air conditioning and domestic hot water systems.

Energy Efficiency Training Center

"Hands on. Ready to work."

Each two day course is designed to introduce the individual to basic weatherization concepts and material installation techniques by the use of both classroom instruction and "hands-on" laboratory experience.

Students will learn how to install attic, wall and floor insulation & implement the air sealing procedures necessary to increase the effectiveness of the installed insulation.

All courses offered through the Energy Efficiency Training Center feature open enrollment. That means there are no pre-entry requirements to be met. The training is available to any adult 18 and over who is interested in delivering residential energy efficiency services as a career.

The training emphasis is on demonstrating the application of weatherization techniques and allowing the student to perform the techniques on a real house. Training is conducted by BPI-certified Home Energy Specialists.
